PROFESSIONAL SUMMARY

QA Software Tester with 1.5+ years of experience in Functional Testing, Regression Testing, API Testing, Responsive Testing, Test Case Design, and Defect Management across ERP, CRM, web, and mobile applications.

Hands-on experience in Selenium WebDriver, Playwright, Java, TestNG, Postman, SQL, Jenkins, Git, and JIRA through automation frameworks and practical implementation. Skilled in designing test scenarios, executing end-to-end testing, validating REST APIs, and supporting Agile/Scrum development environments.

Seeking opportunities as a QA Engineer, Automation QA Engineer, or Software Test Engineer to contribute to quality engineering, test automation, and continuous delivery initiatives.

TECHNICAL SKILLS

Automation Testing: Selenium WebDriver (Java), Playwright (Practical Exposure), TestNG, Page Object Model (POM), Maven

Programming: Java, SQL, JavaScript

API Testing: Postman, REST API Testing, CRUD Operations, JSON Validation, API Response Verification, DevTools Network Analysis

Test Management & Defect Tracking: JIRA, Test Case Design, Test Scenario Creation, Defect Management, Bug Reporting, Defect Life Cycle, Root Cause Analysis

Manual Testing: Functional, Regression, Smoke, Sanity, UI, Cross-Browser, Responsive, Mobile Testing, UAT Support, Requirement Analysis

Reporting & Data: Allure Reports, Extent Reports, Apache POI (Excel Data-Driven Testing)

Performance & Security: JMeter (Load & Spike Testing), Basic Security Testing (IDOR, XSS, CSRF)

CI/CD & Version Control: Git, GitHub, Jenkins (Jenkinsfile, CI/CD Pipeline Basics)

Methodologies: Agile, Scrum, STLC, SDLC, Sprint Testing, Sprint Planning

PROFESSIONAL EXPERIENCE

QA Software Tester

Apr 2025 – Jun 2026

Shrewd Business Solutions — Coimbatore, Tamil Nadu

Manual Testing

- Executed 500+ functional, regression, smoke, sanity, and UI test cases across ERP, CRM, and enterprise web/mobile applications, achieving 95%+ test coverage across critical modules.
- Designed and executed 150+ test scenarios for positive, negative, and edge conditions across dashboards, multi-step forms, RBAC flows, and e-commerce checkout, ensuring zero critical defects in production.
- Performed responsive testing and cross-browser testing across 4+ browsers (Chrome, Firefox, Edge, Safari) and mobile app testing across 3 applications (consulting, pest control, digital gold), identifying UI/functional issues per release cycle.
- Logged, tracked, and managed defects in JIRA with severity classification (Critical/Major/Minor), root cause analysis, and screenshot evidence — maintaining 90%+ resolution rate within sprint cycles.
- Collaborated with developers, BAs, and stakeholders in Agile/Scrum sprint cycles for requirement analysis, test planning, defect triage, sprint testing, and release validation.

Automation Testing (Selenium + Java)

- Developed and maintained a Selenium WebDriver (Java) automation framework using TestNG and Page Object Model (POM) architecture, automating 30+ test scenarios and reducing manual regression execution time by ~60%.
- Automated 10+ end-to-end workflows — login, multi-step forms, booking flows, smoke/regression suites — handling dynamic XPath, explicit waits, modals, and toast notifications with zero flaky tests across sprint cycles.
- Implemented file upload automation (PDF/image); integrated Allure HTML reporting with failure screenshots; enabled data-driven testing via Apache POI (Excel), reducing test authoring time by 40%.
- Configured Maven build lifecycle and TestNG XML suites; set up Jenkins CI/CD pipeline (Jenkinsfile) to trigger automated regression on every code push, cutting feedback loop to under 30 minutes.

API, Security & Performance Testing

- Validated 50+ REST API endpoints via Postman (GET, POST, PUT, DELETE), verifying JSON responses, status codes, and UI-to-backend data consistency — catching defects before client release.
- Performed security testing (IDOR, XSS, CSRF, parameter tampering) on authentication and RBAC flows, identifying access control vulnerabilities across 2+ applications before production release.
- Designed and executed JMeter load and spike test plans; analyzed throughput, response time, and error rates, identifying performance bottlenecks before production deployment.

AUTOMATION PROJECTS

Alatron Vendor Web Automation

github.com/Ananth-QA/alatron-vendor-web-automation

Selenium • Java • TestNG • POM • Maven • Allure • Extent • Jenkins • Git

- Built a full end-to-end Selenium automation framework for a vendor portal covering 10+ critical flows: login, form submissions, booking workflows, and multi-file PDF/image upload validation using POM architecture; implemented reusable POM components, improving script maintainability and reducing code duplication across modules.
- Integrated Allure HTML reports with auto-captured failure screenshots; configured Jenkinsfile-based CI/CD pipeline for scheduled regression runs, achieving 95%+ pass rate on stable builds.

Poppy Admin Automation

github.com/Ananth-QA/poppy-admin-automation

Selenium • Java • TestNG • POM • Maven • Allure • Git

- Automated 8+ core admin workflows — login, poster/video creation, CRUD operations (edit/delete), and file download validation — using Selenium + TestNG POM, reducing manual regression time per sprint.
- Executed automation suites across multiple browser configurations and validated responsive behavior for key administrative workflows, ensuring cross-browser compatibility.

EDUCATION & CERTIFICATIONS

MCA — SNS College of Technology, Coimbatore

CGPA: 8.17

BCA — Yadava College, Madurai

CGPA: 7.5

Certifications: Test Automation Foundations (LinkedIn Learning) • Java Full Stack — Wipro TalentNext • SQL for Beginners (Prepinsta)
